

AMIT KUMAR GUPTA

(+91) 9644784218 | amitikumargupta13579@gmail.com | Bhilai, Chhattisgarh, India | linkedin.com/in/amit-kumar-gupta

PROFESSIONAL PROFILE

Full Stack Developer / Software Engineer (Python) with **2+ years** shipping production apps in **Python, Django REST Framework, FastAPI, PostgreSQL, and Angular 14+**, plus **1 year of GenAI work** — LLMs, RAG, LangChain, AI agents. Delivered 4+ production systems serving **2,000 concurrent users**.

TECHNICAL SKILLS

Frontend Development: Angular 14+, TypeScript, RxJS, Angular Material, Reactive Forms, Lazy Loading, HTTP Interceptors, Route Guards, Tailwind CSS, Vue.js 3

Backend Development: Python, Django REST Framework, FastAPI, Celery, REST / RESTful API Architecture & Design, Middleware, WebSockets, Node.js, Express.js, Redis, Swagger/OpenAPI documentation

Databases: PostgreSQL, MySQL, Query Optimization, Indexing, Schema Design

AI / Generative AI: LLMs, Retrieval-Augmented Generation (RAG), LangChain, LangGraph, OpenAI API, Prompt Engineering, AI Agents & tool calling, Vector Databases (FAISS, ChromaDB), Embeddings, MCP (Model Context Protocol), CrewAI

Cloud & DevOps: AWS (EC2, S3), Docker, Nginx, CI/CD (Jenkins, Bitbucket), Linux Server Administration, Git

Security & Tools: JWT, OAuth2, RBAC, XSS/CSRF Protection, Audit Logging | Postman, JIRA, TortoiseGit, Code Review

PROFESSIONAL EXPERIENCE

Full Stack Developer (Python) — Divyal Technology Pvt. Ltd., Bhilai April 2024 – Present

- Built **Angular 14+ / TypeScript SPAs** for **ERP/CRM**, parking, ticketing and e-commerce platforms — lazy-loaded modules, RxJS real-time dashboards, HTTP interceptors, role-filtered route guards, Angular Material library.
- Shipped **35+ Swagger-documented REST APIs** for **500–2,000 concurrent users** (JWT refresh-token rotation, field-level RBAC); **40% faster responses** via query optimization, indexing, Redis caching, async queues; Docker/Nginx on AWS EC2, Jenkins/Bitbucket CI/CD, Agile Scrum.

Key Projects Delivered at Divyal Technology:

1. ERP/CRM — Stock & Procurement Management Module — Angular 14+ SPA + TypeScript + REST APIs

Complete procurement-to-inventory module of a company-wide ERP, covering the full material lifecycle from purchase request to warehouse stock.

- Built the end-to-end **Purchase Requisition to Purchase Order to Gate Entry (GEN) to Goods Received Note (GRN) to Inventory** workflow with concurrency-safe sequential document numbers and GRN/PO PDF generation, plus **Gate Pass issuance** for project consumption and warehouse-to-warehouse transfers with automatic stock-balance adjustment and reversal on delete.
- Delivered **real-time stock-balance tracking** per warehouse/item with unit conversion (alternate units displayed, base units persisted) and received/accepted/rejected reconciliation against PO balances, fronted by dynamic Reactive Forms/FormArray item rows, cascading category-subcategory-item dropdowns, **server-side paginated DataTables**, session-persisted filters, and role-based menu visibility.

2. RailPay — Multi-Tenant Rail Compensation Platform — Claims Processing + Payment & Rail-Data API Integrations (UK Train Operators)

White-labelled "Delay Repay" compensation platform serving 12+ UK Train Operating Companies — a public customer portal for passengers to submit claims and an internal agent portal for staff to validate and pay them, both on one shared database.

- Worked on multi-tenant **claims processing workflows** — submission, validation, approval/rejection, appeals, and payout tracking under per-operator branding and business rules — with claim validation integrated against **Darwin live train-running data** and the **NRE OJP journey planner** to automatically verify delays and journeys.
- Integrated payouts via **PayPal, Realex/Global Payments (card), and BACS bank transfer** with SendGrid transactional email and Twilio SMS notifications, on a platform secured by **RBAC, session security, and full audit logging** of claims, payments, and user actions.

3. Parking Management System — Angular 14+ + Python/Django REST Framework + PostgreSQL Real-Time Admin Dashboard

End-to-end vehicle parking platform: booking, entry/exit management, and live slot tracking for facility operators.

- Built **Django REST Framework APIs** with JWT authentication and RBAC over a **PostgreSQL/Django ORM schema** with indexed queries for vehicles, slots, bookings, and entry/exit events, plus Redis caching for hot slot-availability reads.
- Developed the Angular SPA with TypeScript-typed models, **RxJS BehaviorSubject real-time slot updates**, Angular Material data tables, and role-guarded navigation; Dockerized deployment on AWS EC2 with CI/CD.

PROJECTS

GenAI Applications — RAG Document Q&A & AI Agents — OpenAI API + LangChain + Vector Databases

Self-driven, hands-on AI engineering work (1 year) building production-style GenAI applications.

- Built **retrieval-augmented generation (RAG)** chatbots over private document sets: chunking, embedding generation, vector storage (FAISS/ChromaDB), similarity-search retrieval, and grounded answer synthesis.
- Developed **AI agent workflows** with tool calling — prompt-engineered agents that invoke APIs and functions to complete multi-step tasks autonomously — using **LangGraph, CrewAI, and MCP (Model Context Protocol)** for multi-agent orchestration and tool integration.

EDUCATION

PG Diploma in Advanced Computing (PG-DAC) — CDAC, ACTS Pune

March 2023 – March 2024

B.Tech — Computer Science & Engineering — CSVTU, Bhilai

Graduated 2022
